

|

Using the JavaScript language, have the function FirstReverse(str) take the str parameter being passed and return the string in reversed order. For example: if the input string is "Hello World and Coders" then your program should return the string sredoC dna dlroW olleH.

#### Sample Test Cases

Input: "coderbyte"  
Output: "etybredoc"

Input: "I Love Code"  
Output: "edoC evoL I"
